

# Bar and Puller Grip Application Instructions

(Make sure your crow bar is both clean and dry before proceeding).

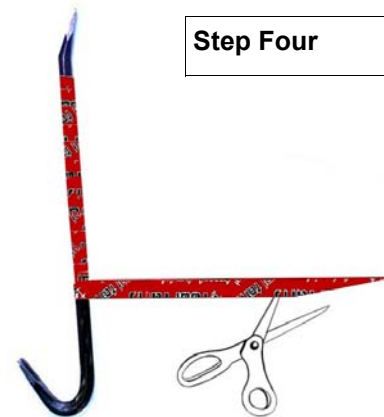

**Step One:** Begin by cutting a bias (angle) in the top of the leading edge of your grip wrap.

**Step Two:** Start wrapping your hammer handle holding the biased cut edge perpendicular to the bar (this will enable your wrap to spiral up the handle overlapping slightly as you proceed).

**Step Three:** Wrap the length of your pry bar. Pull tight as you apply the grip, overlapping the edge approx. 1/4" as you spiral the grip wrap material

**Step Four:** Cut a reverse bias on the end of your grip wrap.

**Step Five:** Apply finish tape to both the beginning and end of your grip wrap.
